

Computer relocation with KVM (Keyboard-Video-Mouse) Extender for your control room

Relocate your computers to the technical/server room. Computers in the control room produce an unnecessary amount of noise and heat. If you try to counteract this with an air conditioning system, the result is increased energy consumption. The work environment is negatively influenced by the computer and it is not uncommon for leg room to be restricted at the workplace.

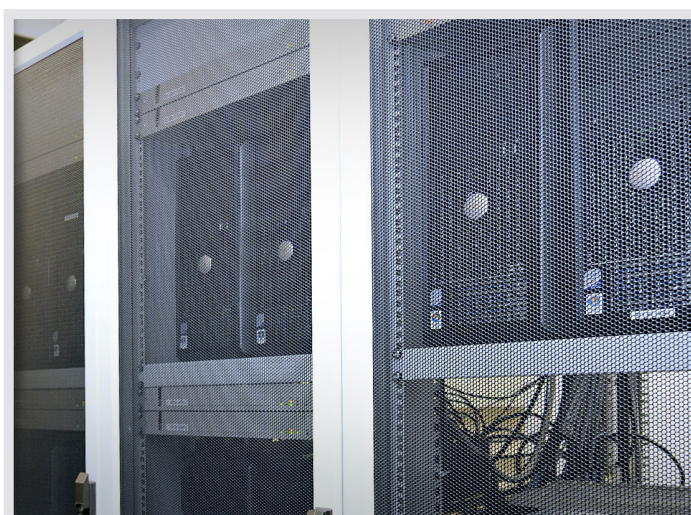

- The KVM signals are **not transmitted over the TCP-IP network**
- Transmission of all data **in true real-time – without loss of quality**
- Transmits **up to four graphics cards** in one device
- **Redundant device version** for highest availability you can get

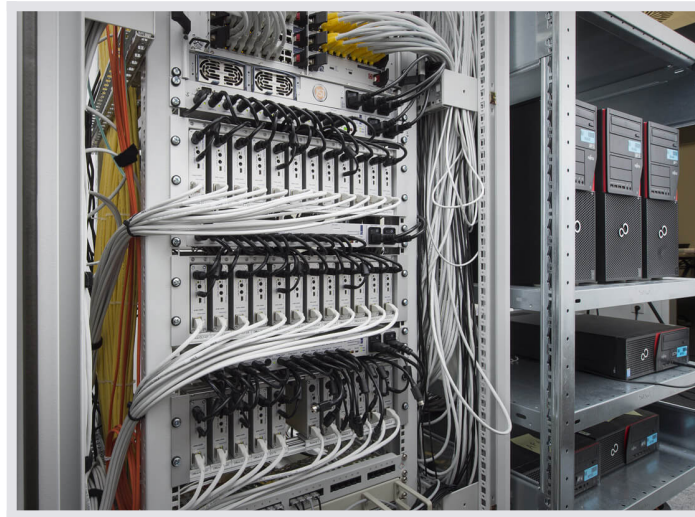

REQUEST A NON-BINDING OFFER

A pleasant atmosphere for your control room team!

Our KVM Extender is a periphery-saving solution that significantly reduces noise levels in control rooms and control centers and prevents unnecessary heat emission. Thanks to the 24/7 high availability computer outsourcing, the computers can be relocated from the control room to an access-protected and climate-controlled technical room.
