## New MEDIA BROADCAST control room center established

The integration of a video rear projection screen with over 250 TV images and the new proactive display wall with large variably interconnected LC displays was another challenge for JST.

MEDIA BROADCAST is one of the leading service providers for the broadcasting and media industry in Germany. With our performance and industry expertise, we offer top quality and service at the highest level. We are well versed in all aspects of radio and television digitisation and have mature future solutions for the requirements of our customers' markets.

This picture shows the new Network Operation Center (NOC) in Usingen. The NOC monitors all MEDIA BROADCAST products 24 hours a day, 365 days a year at approximately 2,700 locations over 13,000 broadcast products.

JST has not only taken over the relocation of the existing control desks from Frankfurt. The main task was to bring the complete computer outsourcing of 120 PCs via MultiConsoling to 8 TFT monitors of each workstation. Thanks to the MultiConsoling technology, it was possible to merge the two divisions, Network Management Broadcasting and Service Center Satellite. The integration of a video rear projection screen with over 250 TV images and the new proactive display wall with large variably interconnected LC displays was another challenge for JST.

**"The main difficulty in redesigning the network management center was that there was no interference with monitoring and management activities during ongoing operations. This difficult task was carried out to our complete satisfaction by the competent planning and cooperation of JST and my employees".**

**Michael Mutz**

NOC Operation Manager

"From the first performance to the realisation I always had a good feeling. Especially the care and support during the various stages of the move were absolutely professional and trouble-free. For that, my sincere thanks to the entire team at JST."

**Volker Fischer**

Network Operation Center Manager

**REQUEST AN OFFER WITHOUT OBLIGATION**

The components used in this project:

**DisplayWall** with special S-PVA panels for reliable 24/7 operation - optional with proactive alarm function

**MultiConsoling® System** – complete control room system for workplace, monitor wall and other systems

**myGUI® user interface** - in the intuitive 3D design of your control room for maximum user comfort

**Stratos X11 control room desk** – optional with height adjustment and proactive AlarmLight system
