

Infection protection in the control room simulator

The Robert Koch Institute (RKI) and the German Federal Center for health education (BZgA) recommend preventive hygiene and behavioral measures to protect against SARS-CoV-2. Against this background, we have adapted the concept of our meetings accordingly.

No handshakes: We do without this greeting ritual and give each other a smile.

Prevention: For your and our protection we ask you not to invite any employees with symptoms of a cold.

Consistent separation: The control room simulator has both a separate entrance and separate washrooms that are exclusively available to your team.

Room disinfection: All surfaces in the control room simulator are carefully disinfected before and after meetings. This also applies to keyboards and mice.

Hand disinfection: In the control room simulator there are disinfection dispensers ready for you. Please use these before the start of the event and during the meeting, for example after each using of the simulator equipment. Alternatively, the washrooms are available for manual hand cleaning.

Spacing rules: Both at the conference table and during the practical parts on the technical equipment of the control room simulator, 1.5 meters is the minimum distance between participants.

FFP2 mask: Our workshop is divided into practical units and meeting rounds at the conference table. In all situations of our interaction, the following applies: If the aforementioned distances cannot be maintained, we request the use of an FFP2 mask.
